MOTIVATION

I am passionate about **solving business problems** using Data Science & Analytics. I systematically & creatively use my skillset to **add tangible value** to the team, the business and the end-user. I am constantly **learning** and always looking to improve.

SKILLS & TOOLS

Programming: SQL, Python (Base, Pandas, Numpy, Matplotlib, Scikit-Learn, Streamlit, Keras, LangChain)
Tools: Excel, Tableau, Github, AWS (S3, Lambda, IAM, EC2, SageMaker, RDS, DynamoDB), Docker
Maths: Linear Algebra, Statistics (Hypothesis Testing, AB Testing, Central Limit Theorem, Distributions)
Machine Learning: Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, k-means, PCA, Association Rule Learning, Causal Impact Analysis, Neural Networks

DATA SCIENCE PROJECTS (<https://petefinn762-bit.github.io>)

Assessing Marketing Campaign Performance:

- To assess the effectiveness of two types of mailers in a marketing campaign, I applied the **Chi-Squared Test for Independence**. This solution was designed to enable the business to maximise its marketing ROI.

Compressing Feature Space for Classification:

- To compress 100 unlabelled, sparse features into a more manageable number to classify buyers of Ed Sheeran's latest album, I applied **Principal Component Analysis** before using a **Random Forest Classifier**. This solution was designed to allow the client to more accurately target potential buyers of Ed Sheeran's new album.

Understanding Alcohol Product Relationships:

- To understand what products are frequently bought together, I applied **Association Rule Learning** to analyse the transactional relationships and dependencies between products in the alcohol section of a supermarket. This solution was designed to enable the business to optimise its store layout and product discount selection.

EMPLOYMENT HISTORY

Freelance Data Scientist

May 2026

Innerv8 Sports and Spinal

- To help this physiotherapy business manage cash-flow and staffing levels, I analysed appointment data, identified seasonal trends in appointment demand and displayed my findings using **Tableau**. This allowed the business to allocate staff appropriately to maximise profit-margins. I am currently building a model using **Principal Component Analysis** and a **Random Forest Classifier** to predict recovery time for patients.

Pastoral Manager / ESL Co-ordinator / Teacher / Sports & Music Coach

2003-2025

Marlborough College, Marlborough College Malaysia, King's Ely, Epsom College

- explained complex concepts (Latin and Greek grammar to English students / English grammar to Malaysian students) using simple language and engaging visual presentations
- to improve ESL student retention rate, I used English language assessment data to predict the number of hours of extra English tuition required to help ESL learners achieve a B2 level of English by the time they took their IGCSE exams. I then categorised the students into 3 groups, each assigned to a pathway designed to achieve that goal.
- mentored colleagues in the use of technology and AI in the classroom
- used data to monitor academic performance, predict exam results, inform planning and report to key stakeholders
- used Airtable to track mental and physical wellbeing of 60 pupils learning remotely during lockdown
- managed team of pastoral mentors to ensure consistent adoption of best practice
- managed target rifle shooting club, monitoring finances and performance data
- coached student rock and jazz groups

Researcher

2000-2002

BBC Television

- researched quiz questions and managed question database for BBC's Weakest Link and Judgemental

EDUCATION

MA (Oxon) Literae Humaniores

1995 - 1999

New College, University of Oxford

- Studied Latin and Greek Language, Literature, Historical Linguistics, Ancient History, Ancient and Modern Philosophy

PGCE (Secondary) Classics

2002-2003

*King's College, London***COURSES, CERTIFICATES AND QUALIFICATIONS**

Data Science Professional Certification

Jan - May 2026

Data Science Infinity

- **Actionable Learnings:** Extracting & manipulating data using SQL. Using Tableau to create powerful Data Visualizations. Application of statistical concepts such as hypothesis tests for measuring the effect of AB Tests. Utilising Github for version control and collaboration. Using Python for data analysis, manipulation & visualization. Applying data preparation steps for ML including missing values, categorical variable encoding, outliers, feature scaling, feature selection & model validation. Applying Machine Learning algorithms for regression, classification, clustering, association rule learning, and causal impact analysis for measuring the impact of an event over time. Building Machine Learning pipelines to streamline the ML pre-processing & modelling phase. Deployment of an ML pipeline onto a live website using Streamlit. Using Keras to create Artificial Neural Networks and Convolutional Neural Networks. Using Langchain and Open AI to create an LLM Assistant and a SQL Agent. Using Lambda to automate workflows in AWS. Deploying a predictive model using AWS Sagemaker. Creating and querying RDS and Dynamo DB databases. Building a Docker image and pushing it to DockerHub.

Python 3 Fundamentals

December 2025

Pluralsight

- **Actionable Learnings:** Mastering the basics of Python
