MOTIVATION

I am passionate about **solving business problems** using Data Science & Analytics. I systematically & creatively use my skillset to **add tangible value** to the team, the business and the end-user. I am constantly **learning** and always looking to improve.

SKILLS & TOOLS

Programming: SQL, Python (Base, Pandas, Numpy, Matplotlib, Scikit-Learn, Streamlit, Keras, LangChain)

Tools: Excel, Word, PowerPoint, Tableau, Github, AWS (S3, Lambda, IAM, EC2, SageMaker, RDS, DynamoDB), Docker

Maths: Linear Algebra, Statistics (Hypothesis Testing, AB Testing, Central Limit Theorem, Distributions)

Machine Learning: Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, k-means, PCA, Association Rule Learning, Causal Impact Analysis, Neural Networks

DATA SCIENCE PROJECTS (<https://petefinn762-bit.github.io>)

Assessing Marketing Campaign Performance:

- To assess the effectiveness of two types of mailers in a marketing campaign, I applied the **Chi-Squared Test for Independence**. This solution was designed to enable the business to maximise its marketing ROI.

Understanding Product Relationships:

- To understand what products are frequently bought together, I applied **Association Rule Learning** to analyse the transactional relationships and dependencies between products in the alcohol section of a supermarket. This solution was designed to enable the business to optimise its store layout and product discount selection.

Building an AI Help-Desk Assistant:

- To automate a customer help-desk, I built a **Retrieval Augmented Generation** system which allowed an LLM to answer customer queries quickly, accurately, consistently, and safely, using only approved internal information. This solution enabled the business to improve customer experience.

EMPLOYMENT HISTORY

Freelance Data Scientist

May 2026

Innerv8 Sports and Spinal

- To help this physiotherapy business manage cash-flow and staffing levels, I analysed appointment data using **Excel**, identified seasonal trends in appointment demand and displayed my findings using **Tableau**. This allowed the business to allocate staff appropriately to maximise profit-margins. I am currently building a model using **Principal Component Analysis** and a **Random Forest Classifier** to predict recovery time for patients.

Pastoral Manager / EAL Co-ordinator / Teacher / Sports & Music Coach

2003-2025

Marlborough College, Marlborough College Malaysia, King's Ely, Epsom College

- Translated complex concepts into accessible language and dynamic visual presentations to maximize student engagement and comprehension
- Boosted EAL student retention through data-driven intervention: predicted student catch-up hours based on assessment data and deployed three tailored learning pathways.
- Up-skilled faculty on classroom technology and AI integration, driving modern pedagogical practices across the department
- Leveraged academic data to forecast exam results, optimize lesson planning, and deliver strategic insights to key stakeholders
- Led a team of pastoral mentors, standardizing best practices to guarantee consistent, high-quality student support.
- Engineered a digital wellbeing tracker during lockdown to monitor the physical and mental health of 60 remote pupils, ensuring proactive pastoral support.
- Directed the target rifle shooting club, managing the annual budget, optimizing finances, performing risk assessments and tracking member performance metrics.
- Coached student rock and jazz ensembles, fostering creative collaboration and guiding groups toward live performance readiness.

Researcher

2000-2002

BBC Television

- researched quiz questions and managed question database for BBC's Weakest Link and Judgemental

EDUCATION

MA (Oxon) Literae Humaniores

1995 - 1999

New College, University of Oxford

- Studied Latin and Greek Language, Literature, Ancient History, Ancient and Modern Philosophy

PGCE (Secondary) Classics

2002-2003

*King's College, London***COURSES, CERTIFICATES AND QUALIFICATIONS**

Data Science Professional Certification

Jan - May 2026

Data Science Infinity

- **Actionable Learnings:** Extracting & manipulating data using SQL. Using Tableau to create powerful Data Visualizations. Application of statistical concepts such as hypothesis tests for measuring the effect of AB Tests. Utilising Github for version control and collaboration. Using Python for data analysis, manipulation & visualization. Applying data preparation steps for ML including missing values, categorical variable encoding, outliers, feature scaling, feature selection & model validation. Applying Machine Learning algorithms for regression, classification, clustering, association rule learning, and causal impact analysis for measuring the impact of an event over time. Building Machine Learning pipelines to streamline the ML pre-processing & modelling phase. Deployment of an ML pipeline onto a live website using Streamlit. Using Keras to create Artificial Neural Networks and Convolutional Neural Networks. Using Langchain and Open AI to create an LLM Assistant and a SQL Agent. Using Lambda to automate workflows in AWS. Deploying a predictive model using AWS Sagemaker. Creating and querying RDS and Dynamo DB databases. Building a Docker image and pushing it to DockerHub.
